

Siddhant Rao

Software Engineer | Distributed Systems | Scala | Kafka | Enterprise SaaS

Bengaluru, India | +91 9112303091 | sids9rao@gmail.com

LinkedIn: [linkedin.com/in/siddhant-rao-a696471b4](https://www.linkedin.com/in/siddhant-rao-a696471b4)

Professional Summary

Software Engineer with experience building scalable distributed systems, event-driven architectures, and enterprise SaaS platforms. Specialized in Scala, Java, Kafka, microservices, and cloud-native technologies. Proven track record of delivering high-impact synchronization frameworks that improve scalability, reliability, and operational efficiency across enterprise applications.

Technical Skills

Languages: Scala, Java, SQL, TypeScript

Backend: Microservices, REST APIs, Spring Boot, GraphQL

Distributed Systems: Apache Kafka, Event-Driven Architecture, Asynchronous Processing, Data Synchronization

Cloud & DevOps: Docker, Kubernetes, Cloud Foundry, CI/CD

Databases: SAP HANA, SQL Server, MySQL

Frontend: Angular, TypeScript

Tools: Dynatrace, Swagger, Gerrit, Git, JUnit

Professional Experience

SAP Labs India

Bengaluru, India

Software Developer

2022 – Present

- Designed and scaled backend services in Scala supporting enterprise customization workflows across thousands of supplier integrations.
- Designed event-driven Kafka architectures that reduced migration execution time by over 90%, enabling near real-time synchronization between legacy and next-generation platforms.
- Improved system throughput and reduced API response latency by 25% through asynchronous processing, workflow optimization, and efficient data access patterns.
- Increased platform reliability by introducing schema validation, backward compatibility safeguards, and automated data quality controls, reducing integration failures by 30%.
- Owned critical production incidents across distributed microservices, leveraging Dynatrace observability and root-cause analysis to improve service availability and operational resilience.
- Built automated unit and integration testing frameworks that strengthened release quality and accelerated confidence.

Info Tech Corporation

India

Software Engineering Intern

2021

- Developed and deployed a government web application using C#, ASP.NET, and SQL Server.
- Built backend services and database integrations supporting workflow automation and public-sector operations.

Key Projects

Enterprise Synchronization Framework (Forward & Reverse Sync)

- Built a Kafka-based distributed synchronization platform supporting forward and reverse synchronization of enterprise customizations across SaaS environments.
- Designed transformation pipelines enabling schema compatibility between legacy and next-generation platforms.
- Implemented fault-tolerant event-driven workflows ensuring consistency, scalability, and near real-time synchronization.
- Eliminated manual migration processes and significantly improved operational efficiency.

Legion – Anonymous Chat Platform

- Developed a real-time anonymous messaging platform using Django, AJAX, and asynchronous communication workflows.

Education

BITS Pilani

CGPA: 9.0/10

M.Tech, Software Engineering

Christ University

CGPA: 9.58/10

B.Sc, Computer Science
