SUMMARY

Software Engineer specializing in distributed systems, event-driven architectures, and large-scale data synchronization. Experienced in building Kafka-based pipelines, microservices, and automated migration frameworks for enterprise SaaS platforms.

SKILLS

Scala, Java | Microservices, Spring Boot | Kafka, SQL | Docker, Kubernetes | Angular | Dynatrace, Swagger | JUnit

EXPERIENCE

Software Developer | SAP Labs | 2022–Present

- Built distributed synchronization framework enabling automated Gen1 ↔ NextGen migration across microservices.
- Developed Kafka-based event pipelines for real-time supplier onboarding and data propagation.
- Improved API reliability with schema validation, compatibility, and data masking.
- Optimized latency and resolved cross-service production issues in distributed systems.
- Enhanced observability and deployment reliability via monitoring and DevOps improvements.

KEY PROJECT

Enterprise Synchronization Framework (Forward & Reverse Sync)

- Designed event-driven migration system triggered by Kafka events for supplier onboarding.
- Automated customization migration across tenants, eliminating manual workflows.
- Implemented bidirectional sync ensuring consistency between legacy and modern systems.
- Built data transformation pipelines (FDML ↔ Portal formats) for schema compatibility.

EDUCATION

M.Tech Software Engineering, BITS Pilani (GPA: 9/10)

B.Sc Computer Science, Christ University (GPA: 9.58/10)
